HSR Layout, Bangalore

Profile Summary

Highly experienced Generative AI professional with 10+ years of experience, including 4+ years in building AI-driven and scalable backend applications. Specializing in developing and deploying LLM-powered solutions using LangChain, OpenAI, and Hugging Face Transformers, with strong foundations in NLP, semantic search, and chatbot automation. As a Backend Engineer with 3+ years of proven success, I build production-grade backend services with Python, Django, Flask, and event-driven systems using Kafka, RabbitMQ, and Redis. Experienced in deploying AI pipelines using SageMaker and managing infrastructure with Docker, Kubernetes, and cloud platforms like AWS. Passionate about building intelligent, high-impact systems that integrate AI with real-world applications.

Professional Experience

Senior Generative AI & ML Engineer — Globallogic, India

Aug 2020 – Current

- Project - Roku
- Working on the **Code Sharing Tool** and designed and implemented a secure process to enable controlled distribution of Roku OS to third-party partners (e.g., Amlogic, MediaTek). The system ensures sensitive or proprietary components are automatically excluded during packaging, maintaining compliance with Roku’s internal data-sharing policies while supporting efficient partner collaboration
 - Designed and deployed **AI-driven virtual assistants** and **chatbots** using **OpenAI GPT models**, **LangChain**, and custom pipelines for **semantic search**, **text summarization**, and **knowledge retrieval**.
 - Integrated LLMs into live products for intelligent screen parsing and remote interactions, optimizing **inference latency** and improving system **accuracy by 30%** for domain-specific tasks.
 - Built and fine-tuned **transformer models** for NLP classification and intent recognition; used **Hugging Face**, **TensorFlow**, and **PyTorch** in conjunction with **LangChain** workflows.
 - Developed and deployed **machine learning pipelines** using **AWS SageMaker**, collaborating with MLOps teams to containerize and manage lifecycle via **Docker** and **Kubernetes**.
 - Enhanced a **Raspberry Pi-based automation framework** for Roku TVs using **LLMs**, **computer vision**, and **reinforcement learning**, enabling Smart screen recognition, IR signal tuning &Voice command execution
 - Improved device control accuracy and testing reliability across 50+ device types
 - Built **QA Companion**, a generative tool that ingests test cases (Excel, TestRail) and auto-generates **BDD feature files and step definitions** for **Behave** and **Cucumber**.
 - Enabled real-time remote debugging, increasing development throughput and enabling round-the-clock hardware access.
 - Co-developed a **Remote Lab Access system** to securely control and test 50+ Roku/Smart TVs from remote teams across geographies.
 - Co-developed a internal **Roku Commander Tool** remotely control Roku Smart TVs using Roku’s **External Control Protocol(ECP)**.

Skills: Python, Flask, Docker, Kubernetes, TensorFlow, PyTorch, Hugging Face, LangChain, AWS (Lambda, SageMaker, S3), Google Vertex AI, Redis, RabbitMQ, MySQL, NLP, Generative AI, CI/CD (Jenkins, GitLab), QA Automation, Roku ECP,

Senior Backend Engineer — Impelsys, India

Oct 2019 – Aug 2020

- Project – Arlo Camera
- Architected and implemented a **cloud-native monitoring dashboard** using **Django**, **AWS Lambda**, and **CloudWatch** to track the health status of Arlo cameras across global regions (US, UK, Germany, etc.). Integrated with the **Slack API** for real-time alerting, reducing manual monitoring effort by **80%** and improving incident response times
 - Automated end-to-end **data ingestion pipelines** to extract and parse **eBook metadata** from EPUB files into the content management system (CMS), using **Python**, **Pandas**, and **NumPy**. This improved metadata accuracy and eliminated repetitive manual processing.
 - Collaborated with DevOps and QA teams to deploy Dockerized services, configure alerts with **Grafana**, and implement **Celery- based background tasks** for scalable job processing.

Skills: Python, Django, AWS Lambda, AWS CloudWatch, MySQL, Celery, Slack API, Pandas, NumPy, Docker, Git, Grafana,

Software Engineer — Infosys, India

July 2017 - Sep 2019

Project – GoPro (Camera Products & Support Automation)

- Designed and implemented an **automated support system** using **Python**, **Django**, and **Natural Language Processing (NLP)** to intelligently route and respond to customer queries via **email**, **phone**, **text**, and **chatbot** channels. This solution significantly reduced manual support effort and improved first-response resolution time.
- Developed a **real-time health monitoring dashboard** for GoPro camera devices by integrating **Grafana** with internal data points and metrics sources, enabling proactive issue tracking, faster root cause analysis, and operational visibility for support teams.
- Automated the **build upgrade and deployment lifecycle** for GoPro’s embedded products using **Python scripting** and **Jenkins Pipelines**, ensuring smooth and reliable firmware releases across device families.
- Contributed to improving **CI/CD workflows**, system observability, and operational efficiency as part of a cross-functional Agile team.

Skills: Python, Django, NLP, Grafana, Jenkins, REST APIs, Git, Agile Methodologies

Software Engineer — HCL, India

Feb 2015 - July 2017

- Utilized **ServiceNow** to manage user accounts, including creating user IDs, resetting passwords, and unlocking credentials, supporting internal teams with access control tasks.

Skill and Tools

- **Operating System:** Windows & Linux
- **Programming Languages:** Python, Core Java
- **Foundations:** Data Structures, Algorithms, Object-Oriented Programming (OOP)
- **Web Frameworks:** Django, Django REST Framework (DRF), Flask
- **Testing & Automation:** Pytest, Unittest, Behave, Cucumber, Selenium, CI/CD (Jenkins, GitLab CI)
- **Distributed Systems & Messaging:** Kafka, RabbitMQ, Redis
- **Cloud & DevOps:** AWS (Lambda, S3, RDS, CloudWatch, Beanstalk, SageMaker), GCP (Vertex AI), Docker, Kubernetes
- **Databases:** MySQL, PostgreSQL, MongoDB
- **Data Processing & Visualization:** Pandas, NumPy, Matplotlib
- **Machine Learning & NLP:** Scikit-learn, TensorFlow, PyTorch, spaCy, NLTK, SentenceTransformers
- **Generative AI & LLMs:** OpenAI GPT, LangChain, Hugging Face Transformers, Prompt Engineering
- **MLOps & Deployment:** Flask APIs, Dockerized Model Inference, CI/CD for ML

Education

Bachelor of Technology, Electronics & Comm Engineering, Durgapur with the over all 80%

2010 - 2014

Accomplishments

- Awarded once and appreciated @Impelsys for quick delivery of projects and resolving critical customer issues.
- Received 4 awards along with certificates @Globallogic for quick delivery of projects and resolving critical customer issues.
